Cloud Amber's vision is to provide products that enable Traffic Managers to model, monitor and control the environmental effects of travel as well as reducing congestion to maximise the use of a limited road network. It has been demonstrated many times that the most sophisticated systems are dependant on resilient infrastructure to deliver service at the most needy of times. In a recent flooding incident the first thing to go were the IT servers which were housed in the basement of the building, which was located on the flood plain!!

Key features and benefits:

- Hassle free with little corporate IT involvement
- 99.9% guaranteed uptime
- Great value for money
- Provides best value from existing infrastructure
- Stable and reliable solution
- Fully integrated technical solution
